

COMP41110: Cloud Computing

Prof. M-Tahar Kechadi

Projects

Deadline: 02 December 2019

Online Event Organiser

Online **Event_Organiser** is an event-management web application. It allows users to create new events, edit or delete active events, and search for events. The main objective of this project is to share some events between a closed group of users. In this project, the students are asked to develop an online **Event_Organiser** with the following operations:

- a. Create new events,
- b. Edit or delete active events,
- c. Archive old events
- d. Search for events,
- e. Share an event or a set of events.

This online **Event_Organiser** can be stored in cloud-based storage. Students can use any web development tools to develop this online application. (Cloudera platform recommendation) or AWS, or any other cloud system.
